

Why Choose Catapult as your Microsoft Cloud Services Partner?

Why should you as a customer choose Catapult Cloud Services versus all of the many other vendors and options out there? The same reason you choose to do business with your trusted partners - experience, confidence, resources, and other client's satisfaction.

Experience

Catapult Systems is a 20 year old national company whose entire business is based on delivering Microsoft-based solutions. In regards to Microsoft Cloud Services, we have been helping clients deploy Office 365, CRM Online, Intune and Windows Azure services since the first days Microsoft made these services available. At Catapult, we have been working with these same services for years in their on-premises form. In fact, we've been named Microsoft's World Wide Partner of the Year for our work with SharePoint, System Center, and .Net. Recognized for our unmatched competency, we understand how best to integrate cloud services with your current existing investment in on-premises products, services and processes.

Confidence

We have a proven process for conducting projects in partnership with our clients which maps our client's needs and opportunities to the best technology solution for them, all the while

designing a plan to ensure that the end-users are thrilled with the choices made. This is no different with Cloud Services.

Using our Office 365 Accelerate program as an example, we work with our clients to demonstrate the full capabilities of the O365 suite, determine what pieces fit their business through a solution alignment workshop, and then provide options for a pilot, a full O365 suite migration or an Exchange online only migration. The most unique (and fun!) part of our process is Countdown, which is our unique way to ensure user adoption. And we always offer application managed services to our clients so they can be as hands-on or -off as they want to be with their Office 365 solution.

Microsoft

Our exceptional partnership with Microsoft brings tremendous value to our clients in terms of first rate support and problem resolution avenues that other firms are simply unable to offer. Catapult has the ability to submit Office 365 support incidents directly to third tier engineering support, allowing our team to by-pass level 1 and level 2 support and directly interact with engineers on the Office 365 support team. This results in a higher level of support, quicker resolutions times and the ability to have items escalated up the engineering chain must faster if needed.

Client Satisfaction

Our zealous commitment to giving exceptional experiences to our clients is so embedded into our culture that we objectively measure client satisfaction every day using the most researched measure on the planet, the Net Promoter Score (NPS). Having delivered over 5,000 successful client engagements, we invite you to investigate what you might experience with Catapult Systems.

The Bottom Line

Choosing Catapult Systems as your Microsoft Cloud Services Partner guarantees that you will move to the cloud the right way, the first time. We know what we are doing, we realize that technology isn't the hard part and that user adoption and transition is the key to success. Plus, we will support you all the way.

When would you like to start?
