

Catapult Systems

Enabling Business Through Technology®

Microsoft BizTalk Server

Microsoft BizTalk Server is a business process management (BPM) server that enables organizations to automate and optimize mission-critical business processes spanning applications, people and organizations. BizTalk Server delivers unique tools for developers, IT pros and business analysts to more effectively and efficiently create, manage, monitor and optimize distributed business processes.

BizTalk Server 2006 is Microsoft's premier server for building solutions for business process and integration. This latest release includes improvements that allow a developer to create more flexible solutions for integrated business processes, and empowers and enables administrators and business users to more effectively monitor ongoing business processes.

The Catapult Benefit

Catapult Systems employs a personalized approach to ensure that solutions are implemented and configured optimally to address your BPM needs. Rather than make your business adapt to the technology, we first gain an understanding of how the business problem fits into how you operate.

Only then do we work to adapt the technology to your business, helping you install, configure, set up, customize, extend and integrate the appropriate technology to help you maximize the benefits of Microsoft BizTalk Server.

BPM for Increased Visibility

Users require a BPM solution that encompasses enterprise application integration and business-to-business integration while providing increased business visibility, and BPM based on BizTalk Server delivers just that.

Businesses compete on the flexibility of their processes, and BizTalk Server offers tools to more quickly optimize processes at a lower cost.

What's New In BizTalk Server 2006

Simpler setup, management and deployment.

BizTalk Server 2006 provides new capabilities that enable the IT administrator to be more productive in managing and operating an enterprise deployment.

Richer business user and developer experiences.

BizTalk Server 2006 offers features like real-time support for business activity subscriptions and alerts. It also aids developer productivity in building and optimizing business processes with tools such as the new Flat File Schema Creation Wizard, and adapters for SharePoint Services and POP3.

Additional support across Windows Server System.

BizTalk Server 2006 delivers continued support for the Microsoft Windows Server System Common Engineering Criteria, including an x86-based 64-bit version and support for Microsoft SQL Server 2005, Visual Studio 2005 and Microsoft Virtual Server 2005.
