Enabling Business Through Technology<sup>®</sup>

## Microsoft Office SharePoint Server 2007 Top 10 Benefits

Microsoft Office SharePoint Server 2007 helps you solve business problems with a single platform, providing consistent security, site management and topology. Its rich tool set lets your organization manage its documentation, enterprise search, employee and customer communication in a single, integrated platform. This consolidation frees IT from the administrative overhead of managing disparate systems and provides end users with a common, familiar interface for all their collaborative needs.

Rely on Catapult Systems' expertise to help your organization reap the SharePoint's top 10 benefits:

- 1 Provide a simple, familiar and consistent user experience.**  
SharePoint facilitates adoption via tight integration with familiar applications, email and Web browsers that provides a consistent user experience and simplifies how people interact with content, processes and business data.
- 2 Boost employee productivity by simplifying everyday business activities.**  
SharePoint offers comprehensive workflows for building and managing automated business processes, including tools for initiating, tracking and reporting common business activities.
- 3 Help meet regulatory requirements through comprehensive content control.**  
SharePoint eases regulatory compliance and reduces litigation risk by improving control of critical business information. It enables the specifying of security settings, storage policies, auditing police and expiration actions for business records.
- 4 Effectively manage and repurpose content to gain increased business value.**  
SharePoint enables users to create and submit content for approval and scheduled deployment to intranet or Internet sites. Tasks are simplified through new document library templates that maintain relationships between the originals and translations of a document.
- 5 Simplify organization-wide access to structured and unstructured information across disparate systems.**  
SharePoint gives access to data in systems like SAP and Siebel. Users can also create personalized interactions with business systems through a browser by way of user-friendly functionality. And managed document repositories help organizations centralize documents.
- 6 Connect people with information and expertise.**  
SharePoint offers a comprehensive Enterprise Search that incorporates business data along with information about documents, people and Web pages to produce comprehensive, relevant results.
- 7 Accelerate shared business processes across organizational boundaries.**  
SharePoint provides electronic forms-driven solutions to collect critical business information from customers, partners and suppliers through a Web browser. Built-in data validation rules help the gathering of data that can be directly integrated into back-end systems.
- 8 Share business data without divulging sensitive information.**  
SharePoint gives workers access to real-time, interactive Excel spreadsheets from a Web browser through Excel Services. These can maintain and share one up-to-date version, while protecting proprietary information embedded in the documents.
- 9 Enable better-informed decision-making by centralizing business-critical information.**  
SharePoint eases the creation of interactive BI portals that assemble and display information from disparate sources, using integrated capabilities such as dashboards, Web Parts, scorecards, KPIs and business data connectivity technologies.
- 10 Provide a single, integrated platform to manage intranet, extranet and Internet applications across the enterprise.**  
SharePoint is built on a scalable architecture, with support for Web services and interoperability standards including XML and SOAP. The server has rich, open APIs and event handlers for lists and documents.
