Introducing Fuse — a cloud-hosted collaboration and productivity solution for the enterprise
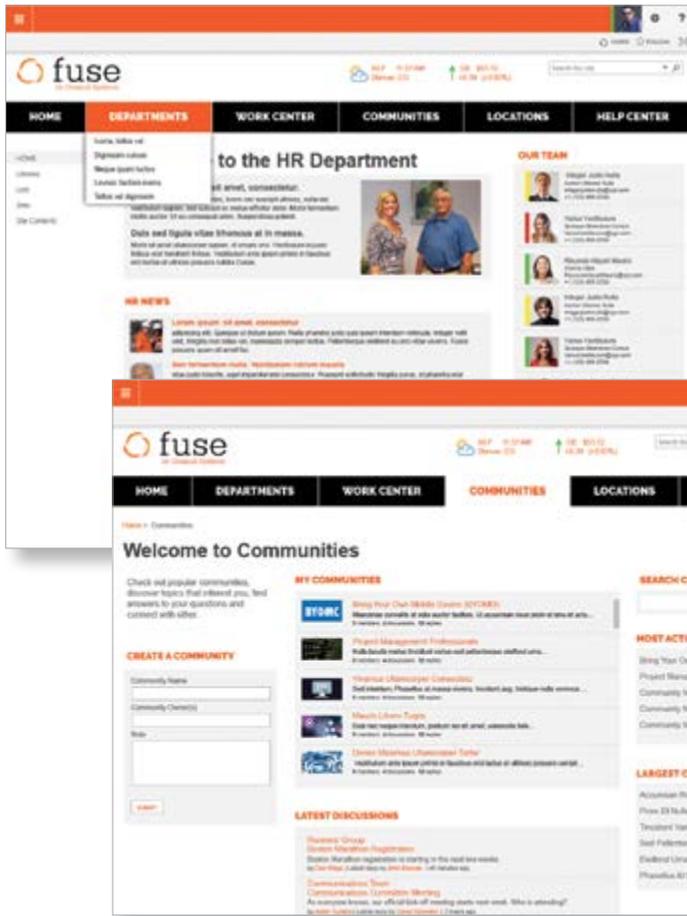

Discover Fuse — Catapult's newest Solution as a Service for Intranets. Utilizing the power of cloud computing, Catapult's Fuse solution allows your organization to take full advantage of the flexibility and scalability of the Cloud to rapidly realize increased information sharing and productivity gains.

Delivering a fully-hosted, professionally developed and designed intranet solution, Catapult provides all the necessary building blocks to help increase employee engagement and innovation within weeks, not months. Leveraging Microsoft SharePoint Online, Catapult delivers a world-class collaborative intranet solution developed by users, for users at fraction of the cost of a traditional solution.

Why Fuse?

Traditional intranets have always been expensive to build, difficult to maintain, hindered by low user adoption, and are typically dominated by the growth of stale content within months of use. With Fuse, you pay based on consumption, content remains fresh based on Catapult's usage management and adoption strategies, and once set up, all services (including administration, deployment, development and ongoing support) are managed entirely by Catapult Systems. It's time to change the game and make your intranet a business driver versus a capital expense.

Fuse Defined

Fuse is a cloud-hosted collaboration solution that improves employee engagement, drives innovation and increases productivity, turning an organization's intranet into a strategic business asset. Built upon Microsoft technologies, Fuse makes it simple for teams to share ideas, foster two way communication, as well as keep content fresh and relevant through enterprise social, blogging and communities.

Business Advantage

Fuse allows your organization to not only experience the benefits of a powerful information and social sharing portal but provides a faster turnaround than any other traditional solution. A robust portal developed based on over 20 years of experience designing hundreds of traditional corporate intranets, Fuse provides your organization a complete, user-friendly employee engagement and performance platform without the task of building a solution from the ground up. It's about getting your organization sharing assets and increasing productivity with a faster turnaround time than a traditional intranet solution, and at less cost to you.

Built in the Cloud

Developed in the Cloud with world-class security standards, Fuse provides anywhere, anytime mobile device access, eliminates the need to ever upgrade or reconfigure your software, and ensures the security and integrity of your data, freeing up your portal support task to focus more on key business initiatives than day-to-day task management.

User Experience and Customization

Built with users in mind, Fuse allows you to customize your site based on branding and organizational needs, including application add-ons most relevant to your end users. Ongoing feature enhancement and support based on user and business requirements is also provided, offering users a more engaging and customized experience. This includes our team monitoring how employees are using the solution and making the necessary adjustments based on our findings to ensure a better user experience and in turn, widely increasing user adoption.
